

Web Developer Assessment Task

Task Overview

To Create a Module, which rewards Users Referrer whenever a payment has been made

- Create a users Model (User)
 - Name: string,
 - Email: String
 - ReferredUser: User (current model)
 - isPaymentMade: Boolean
 - TotalEarnings: Number

Create an API, which

- Accepts a `userId` as Request body
- Sets `isPaymentMade` to true
- Finds `ReferredUser` and increments 10 (rupees) to `TotalEarnings`

Eg

User A

Name: A,

email: email@gmail.com

ReferredUser: B

isPaymentMade: false

totalEarnings: 0

User B

Name: B

email: email2@gmail.com

ReferredUser: null

isPaymentMade: true

TotalEarnings: 20

On calling your "API" with `userId`(mongoDB id of A) ,

A users - `isPaymentMade` will become true

B users - `totalEarnings` will become 30

Deadline: 3rd Feb, 2022, 10PM

Wishing you all the best !
